Appendix-5 Logbook

Dixen- Event Management, Discovery & Ticketing System

Dikshya Singh Shah

CLASS:1205hf2601per

Project Period: 19-Jan-2026 to 18-Feb-2026

TECHNICAL EDUCATION COPENHAGEN

Guldblommevej 5, Ballerup

MONDAY, 19-01-2026

Today's Focus: Starting the project

I started my project by discussing my idea during a school meeting and began drafting the case description. This helped me clarify the system's purpose and the challenges users face when managing events.

Tasks completed:

- ✓ Brainstormed project idea
- ✓ Started Case Description

Thoughts: A good start, I feel confident about the project direction.

TUESDAY, 20-01-2026

Today's Focus: Planning & Documentation

I continued working on the problem formulation and case description. I also started drafting the Requirements Specification (functional and non-functional) and created a basic Gantt chart.

Tasks completed:

- ✓ Wrote Problem Formulation
- ✓ Continued Case Description
- ✓ Started Requirements Specification
- ✓ Created Gantt Chart

Thoughts: Planning early makes the project feel more organized and manageable.

WEDNESDAY, 21-01-2026 TO MONDAY 26-01-2026

Today's Focus: Requirements & Diagrams

I focused on writing the detailed Requirements Specification, drawing flowcharts, and preparing to use case diagrams to visualize system processes.

Tasks completed:

- ✓ Continued Requirements Specification
- ✓ Drew Flowchart
- ✓ Drafted Use Case Diagram and Use Case Description

Thoughts: Visualizing the workflow helps me understand system interactions better.

TUESDAY, 27-01-2026

Today's Focus: Finalizing Planning Phase

I finalized the Requirements Specification, case description, mockups, and use case. All planning documents were ready to be submitted.

Tasks completed:

- ✓ Finalized Requirements Specification
- ✓ Finalized Case Description
- ✓ Finalized Mockups and Use Cases
- ✓ Submitted all planning documents

Thoughts: Planning phase completed. I'm ready to start development next week.

WEDNESDAY, 28-01-2026

Today's Focus: Class Discussion on Product and Process Report.

In class, we discussed the Product and Process Report with the teacher. During the session, I realized that I should explain my diagrams more clearly in the report. I described all the flowcharts and the ER diagram in the Requirements Specification. I also finalized and submitted the case description along with the Requirements Specification.

Tasks completed:

- ✓ Participated in class discussion about Product and Process Report
- ✓ Took detailed notes on report content and structure
- ✓ Explained flowcharts and ER diagram in Requirements Specification
- ✓ Submitted case description along with Requirements Specification

Thoughts / Reflection:

The class discussion clarified how to present both the product and the process report. Explaining the diagrams in the Requirements Specification improved clarity and submitting the case description alongside RS was a key milestone. My notes will serve as a guide for writing the rest of the report efficiently.

WEDNESDAY, 28-01-2026 TO THURSDAY, 29-01-2026

Focus: Backend Setup & Project Organization

This week I focused on setting up the backend using ASP.NET Core, configuring MSSQL with Entity Framework, and preparing the database for the project. I also created a Kanban board to track tasks and added migrations to set up the database structure.

Tasks completed:

- ✓ Setup ASP.NET Core Web API project structure
- ✓ Configured MSSQL & Entity Framework Core
- ✓ Created Kanban board and listed activities
- ✓ Added database migrations and initialized database

Thoughts / Reflection:

Setting up the backend and database structure was a foundational step. Creating the Kanban board helped me organize tasks and plan upcoming work more efficiently.

FRIDAY, 30-01-2026

Today's Focus: CRUD Implementation for Core Entities

I focused on implementing full CRUD operations for the main entities of the system, including Categories, Events, Halls, Organizers, and Bookings. This allowed the backend to create, read, update, and delete records efficiently. I also ensured that database changes were reflected properly and tested each operation.

Tasks completed:

- ✓ Implemented Create, Read, Update, Delete (CRUD) for Categories
- ✓ Implemented CRUD for Events and Halls
- ✓ Implemented CRUD for Organizers and Bookings
- ✓ Verified database updates and tested functionality

Thoughts / Reflection:

Completing full CRUD operations for the core entities was a major milestone. It gave the system a strong foundation for future features and made backend data management more robust and reliable.

SATURDAY, 31-01-2026

Today's Focus: User Authentication & Two-Factor Verification

I implemented the user authentication features for the system. This included user registration, login functionality, and verification using Two-Factor Authentication (2FA). These features ensure that users can securely access the system.

Tasks completed:

- ✓ Implemented user registration
- ✓ Implemented user login functionality
- ✓ Configured Two-Factor Authentication (2FA) for secure access
- ✓ Tested authentication and verification flows to ensure proper functionality

Thoughts / Reflection:

Implementing authentication and 2FA was challenging but rewarding. It strengthened my understanding of security in web applications and ensured that the system's user access is safe and reliable.

SUNDAY, 01-02-2026

Today's Focus: Updating and Finalizing Core Entities

I worked on refining the backend entities to match the project requirements. This included correcting Booking, Event, and Category data structures, updating Venue and Performer details, and implementing Ticket, Performer, and Venue functionality.

Tasks completed:

- ✓ Corrected Booking, Event, and Category entities according to project needs
- ✓ Updated Venue and Performer information
- ✓ Implemented Ticket, Performer, and Venue functionality
- ✓ Verified data consistency and tested CRUD operations

Thoughts / Reflection:

Today's work helped ensure that all core entities align with the project requirements. Implementing and updating these components strengthened the backend and made the system ready for integrating additional features.

MONDAY, 02-02-2026

Today's Focus: Initial Analytics Implementation & API Issue

I began implementing the analytics endpoint for event data aggregation. The backend logic was functioning correctly when tested directly in the browser. However, when calling the endpoint from the Angular frontend, I encountered a CORS policy issue.

I attempted several solutions, including proxy configuration and reviewing API setup, but I was unable to fully resolve the issue during this period. Since the core functionality was implemented, I decided to temporarily pause debugging and continue working on other system components.

Challenges:

- ✓ CORS policy blocked frontend access
- ✓ Multiple troubleshooting attempts did not immediately resolve the issue

Thoughts / Reflection:

Although the feature was not fully integrated at this stage, the experience helped me better understand cross-origin policies and backend–frontend communication. I decided to revisit the issue later with a clearer perspective.

MONDAY, 02-02-2026

Today's Focus: Repository Updates & User Functionality

I worked on updating the generic repository to improve backend data management. I also implemented the UserController, developed the UserProfile functionality, updated Program.cs for configuration changes, and implemented the rating feature for events.

Tasks completed:

- ✓ Updated generic repository for improved CRUD and data handling
- ✓ Implemented UserController to manage user-related operations
- ✓ Updated Program.cs configuration as needed
- ✓ Implemented event rating feature and tested functionality

Thoughts / Reflection:

Updating the repository and implementing user features enhanced the backend structure and functionality. The rating feature adds a useful metric for events and improves system interactivity. Today reinforced the importance of clean architecture and proper configuration for smooth backend operations.

TUESDAY, 03-02-2026

Today's Focus: Organizer Management & Search Functionality

I implemented the backend components for managing organizers. This included creating Organizer DTOs, developing the OrganizerController, and adding a search method to allow querying organizers based on specific criteria.

Tasks completed:

- ✓ Implemented Organizer DTOs for data transfer and validation
- ✓ Developed OrganizerController to handle organizer-related operations
- ✓ Added search functionality for organizers
- ✓ Tested CRUD and search operations to ensure correct functionality

Thoughts / Reflection:

Implementing the Organizer module improved system management for event organizers and made it easier to retrieve specific organizer data. Adding the search method enhances usability and prepares the backend for seamless integration with the frontend.

WEDNESDAY, 04-02-2026

Today's Focus: Report Structure Planning & Frontend Implementation

I started planning the structure and headings for both the Product and Process Report using the notes I took in school and by reviewing example reports from itslearning. This helped me identify the sections I would need, such as project overview, objectives, requirements, diagrams, methodology, and progress.

At the same time, I began implementing the frontend by setting up a Generic Service to handle data operations, which will simplify communication with the backend APIs.

Tasks completed:

- ✓ Drafted the report structure and headings for both reports

- ✓ Reviewed notes from school and example reports for reference
- ✓ Started frontend implementation by creating a Generic Service for API interaction
- ✓ Prepared scaffolding for future frontend components

Thoughts / Reflection:

Planning the report structure early helped me visualize the sections and content needed. Starting the Generic Service in the frontend lays a solid foundation for connecting the backend APIs efficiently, and it feels good to begin integrating both layers of the system.

THURSDAY, 05-02-2026

Today's Focus: Frontend Basic Structure & Language Support

I started with the simpler frontend components that I had previously implemented for NEXT school. I developed the navigation bar and footer and added Danish and English language support to enable multilingual functionality.

On the same day, I implemented the email registration feature, created the registration HTML page, and developed the Category Detail component to display detailed information about selected categories.

Tasks completed:

- ✓ Implemented Navbar component
- ✓ Implemented Footer component
- ✓ Added Danish and English language support
- ✓ Implemented email registration functionality
- ✓ Created Register HTML page
- ✓ Implemented Category Detail component

Thoughts / Reflection:

Starting with simpler components helped me build momentum in the frontend development. Adding language support early ensures better scalability and usability. It feels motivating to see the interface gradually coming together.

FRIDAY, 06-02-2026 TO SATURDAY 7-02-2026

Today's Focus: Backend Updates & Authentication Implementation

Today I updated the backend structure based on project requirements. I implemented user registration, login functionality, and verification to ensure secure access to the system. I also tested the authentication flow to confirm that users can successfully register, verify, and log in without issues.

Tasks completed:

- ✓ Updated backend structure according to project needs
- ✓ Implemented user registration
- ✓ Implemented login functionality
- ✓ Implemented user verification process
- ✓ Tested authentication workflow

Thoughts / Reflection:

Updating the backend improved system stability and structure. Implementing authentication features strengthened the security of the application and marked an important milestone in the project development.

SUNDAY, 08-02-2026

Today's Focus: JWT Integration & Frontend Improvements

Today I implemented a JWT Interceptor in the frontend to automatically attach authentication tokens to outgoing HTTP requests. This ensures secure communication between the frontend and backend APIs.

I also completed the Category Detail component and improved internationalization (i18n) support. Additionally, I updated the config.ts file for better configuration management and refined the footer component.

Tasks completed:

- ✓ Implemented JWT Interceptor for secure API requests
- ✓ Finalized Category Detail component
- ✓ Improved i18n (Danish & English language support)

- ✓ Updated config.ts configuration file
- ✓ Updated and refined Footer component

Thoughts / Reflection:

Implementing the JWT interceptor improved security and streamlined API communication. Enhancing language support and configuration structure makes the frontend more scalable and maintainable. The application is becoming more structured and professional.

MONDAY, 09-02-2026

Today's Focus: Event Details, Booking Flow & Admin CRUD

Today I worked on expanding the event functionality in both backend and frontend. I implemented the Event Detail view with available hall information and payment functionality. I also ensured the booking process works correctly with hall selection.

Additionally, I updated the home component and homepage layout, performed database migration updates, and refined the data models. On the admin side, I implemented full CRUD operations for Event, Category, and Hall management.

Tasks completed:

- ✓ Implemented Event Detail with available hall display
- ✓ Implemented booking functionality with hall selection
- ✓ Implemented payment logic
- ✓ Updated backend accordingly
- ✓ Implemented and updated Home component
- ✓ Updated homepage layout
- ✓ Updated models and performed database migration
- ✓ Updated database structure
- ✓ Implemented Admin CRUD for Event, Category, and Hall
- ✓ Added migration and applied database updates

Thoughts / Reflection:

Today was a productive and intensive development day. Integrating booking and hall availability makes the system more dynamic and user-focused. Completing Admin CRUD strengthens management control, and updating migrations ensured database consistency. The system is becoming fully functional and more structured.

TUESDAY, 10-02-2026

Today's Focus: Resolving Analytics Integration, Recommendations & Admin Features

Today I revisited the event analytics endpoint to resolve the CORS / core policy issue I had previously encountered. After experimenting with different approaches, I modified the controller route to [Route("api/reporting")], which successfully resolved the issue. The endpoint worked correctly, and I was able to fetch analytics data from the Angular frontend and display the results properly.

In addition, I continued enhancing the system by implementing event analysis and social share analytics. I added search functionality and developed a recommendation feature based on event-related data. I also updated the social share functionality to ensure accurate tracking.

On the administrative side, I implemented full CRUD operations for Venue and Performer management. I completed the Admin Dashboard, updated related components, and added a new database migration to reflect recent model changes. The database was updated successfully.

Tasks completed:

Modified AnalyticsController route to [Route("api/reporting")] to fix CORS issue

- ✓ Successfully integrated analytics endpoint with Angular frontend
- ✓ Implemented event analysis functionality and social share analytics
- ✓ Implemented search feature
- ✓ Implemented recommendation logic
- ✓ Updated social share functionality
- ✓ Implemented unauthorized access message handling
- ✓ Implemented CRUD for Venue, Performer
- ✓ Implemented Admin Dashboard

- ✓ Added new migration and updated database

Thoughts / Reflection:

Persistence paid off. Resolving the CORS issue reinforced the importance of testing and experimenting when debugging backend–frontend communication problems. Implementing analytics and recommendation features made the system more intelligent and data-driven. Completing the Admin Dashboard and management features strengthened the professional quality of the application.

WEDNESDAY, 11-02-2026

Today's Focus: Event Submission Workflow & Dashboard Updates

Today I implemented the complete event submission and approval workflow. This includes the event submission feature for organizers and the approval/rejection functionality for administrators. I also developed the User Dashboard and Host Dashboard to provide users with personalized views and management options.

Additionally, I updated the authentication guard (Auth-Guard) and app routing configuration to ensure proper access control based on user roles. I tested the event submission process end-to-end and verified that it works correctly with the backend. The generic repository was also updated to support the new features.

Tasks completed:

- ✓ Implemented event submission feature
- ✓ Implemented event approval/rejection workflow
- ✓ Implemented User Dashboard
- ✓ Implemented Host Dashboard
- ✓ Updated Auth-Guard and App Router configuration
- ✓ Updated Generic Repository
- ✓ Tested event submission functionality end-to-end

Thoughts / Reflection:

Completing the submission and approval workflow was an important milestone. The dashboards improve user experience, and updating role-based routing strengthened system

security. Testing the full workflow gave me confidence that the feature works reliably from frontend to backend.

THURSDAY, 12-02-2026

Today's Focus: Host Dashboard & Testing Implementation

Today I implemented the Host Dashboard to allow organizers to manage their submitted events more efficiently. I updated related components to ensure the dashboard displays accurate and dynamic data.

I also updated the event submission feature to improve functionality and performed testing to verify that everything works correctly. Additionally, I implemented controller tests to validate backend endpoints and ensure reliability.

Tasks completed:

- ✓ Implemented Host Dashboard
- ✓ Updated related frontend components
- ✓ Updated event submission functionality
- ✓ Performed functional testing
- ✓ Implemented Controller Tests for backend validation

Thoughts / Reflection:

Implementing the Host Dashboard improved the system's usability for organizers. Writing controller tests helped strengthen backend stability and gave me more confidence in the application's reliability. Testing is becoming an important part of my development process.

THURSDAY, 12-02-2026 TO WEDNESDAY, 18-02-2026

Focus: Active Report Writing & Final Documentation

During this period, I actively focused on writing and refining the report while completing development tasks. I expanded sections such as methodology, implementation details, diagrams explanation, analytics, and system features. I also updated screenshots and ensured the documentation accurately reflected the final system.

Tasks completed:

- ✓ Actively wrote and refined Product & Process reports
- ✓ Explained diagrams (ER, flowcharts, use cases)
- ✓ Documented backend and frontend implementation
- ✓ Added screenshots and final details
- ✓ Reviewed and edited report for clarity

Thoughts / Reflection:

Writing the report alongside development made it easier to explain technical decisions and reflect on the project journey. This period helped consolidate both technical and documentation work.

FRIDAY, 13-02-2026

Today's Focus: Teacher Meeting & Feedback

I had a meeting with my teacher to demonstrate the system and discuss my report. During the discussion, I received feedback that made me feel more confident and motivated to continue. While talking, I realized I could include additional details about a feature I had implemented but hadn't documented- my Google Maps navigation method. I originally didn't mention it because I thought it wasn't an open API, but the discussion sparked an idea on how to explain it properly in the report and demonstrate its functionality.

Tasks completed:

- ✓ Demonstrated project progress to teacher
- ✓ Received constructive feedback on report and system
- ✓ Planned how to document and explain the Google Maps navigation method in the report

Thoughts / Reflection: Teacher feedback boosted my confidence. The discussion helped me think creatively about how to include features in the report that weren't clearly documented before.
